Summary

Backend-focused Software Engineering student with experience building scalable APIs and AI-integrated applications. Interested in system design, concurrency, and backend development.

Technical Skills

Languages: Java, Python(basic), C#
Frameworks & Libraries: Spring Boot,ASP.NET Core,LangChain
Databases: PostgreSQL, MSSQL, Redis, FAISS (Vector DB)
Tools & DevOps: Docker, Git, Postman, Swagger
Testing: JUnit 5, Mockito
Concepts: RESTful API, JWT Authentication, OOP, SOLID

Projects

ExamSlot — High-Concurrency System *Apr.2026-Present*
Team size: 1

- Built a high-concurrency exam slot booking system using Spring Boot.
- Handled concurrent requests with Redis locking and optimistic locking.
- Improved performance with async processing (RabbitMQ) and real-time updates (WebSocket).

Tech: *Java 17, Spring Boot 3, PostgreSQL, Redis, RabbitMQ, WebSocket, JWT*

SmartDoc AI — Offline Document Q&A System | GitHub *Feb.2026-Presnet*
Team size: 4

- Built an offline document Q&A system for PDF/DOCX using local LLM (Ollama).
- Implemented a RAG pipeline with LangChain and FAISS.
- Improved retrieval accuracy using re-ranking techniques.

Tech: *Python, LangChain, Ollama, Qwen2.5:7b,Streamlit*

InteractHub — Social Media Backend | GitHub *Feb.2026-Present*
Team size: 4

- Designed backend architecture using Clean Architecture.
- Implemented JWT-based authentication with ASP.NET Core Identity.
- Built core features: Posts, file upload (Azure Blob), and real-time notifications (SignalR).

Tech: *C# ASP.NET Core 8, EF Core, MSSQL, JWT, SignalR, Azure Blob Storage, Azure App Service, Swagger*

Education

Sai Gon University *2023 – Expected 2028*

Bachelor of Software Engineering
